Coding for Laparoscopic Sacral Colpopexy

Minimally invasive approaches to suspension of the vaginal apex have become much more common in the past decade. These procedures are used to support the vaginal apex in the setting of vaginal vault prolapse after hysterectomy and are also performed concomitantly with hysterectomy to correct symptomatic prolapse of the uterus and vaginal apex. This procedure supports the apex, as well as the anterior and posterior vaginal walls by means of insertion of a mesh or graft (most commonly a polypropylene mesh in modern practice, although other materials have been used) which is affixed to the anterior longitudinal ligament of the sacrum just caudal to the sacral promontory. These grafts may be manufactured products or may be fabricated by the surgeon from surgical materials during the procedure.

CPT codes and RVU table from 2019 National Physician Fee Schedule:

<table>
<thead>
<tr>
<th>CPT Code</th>
<th>Description</th>
<th>2019 RVU’s (Work)</th>
<th>2019 Total RVU’s (Facility)</th>
</tr>
</thead>
<tbody>
<tr>
<td>57425</td>
<td>Laparoscopy,surgical, colpopexy (suspension of vaginal apex)</td>
<td>17.03</td>
<td>27.68</td>
</tr>
<tr>
<td>57280</td>
<td>Colpopexy, abdominal approach</td>
<td>16.72</td>
<td>27.27</td>
</tr>
<tr>
<td>57283</td>
<td>Colpopexy, vaginal; intra-peritoneal approach (uterosacral, levator myorrhaphy)</td>
<td>11.66</td>
<td>19.62</td>
</tr>
<tr>
<td>57426</td>
<td>Revision (including removal) of prosthetic vaginal graft, laparoscopic approach</td>
<td>14.30</td>
<td>24.22</td>
</tr>
</tbody>
</table>
Billing Tips:
All three colpopexy codes have a 90-day global period. Should revision of the graft be required within this global period, be sure to use an appropriate modifier, such as -78 (unplanned return to OR for a related procedure).

Revision of a vaginal graft via laparoscopic approach (CPT code 57426) and Revision of prosthetic vaginal graft, vaginal approach (CPT code 57295) do not include replacement. Therefore, these codes may be billed in addition to the replacement of graft procedure via laparoscopic sacral colpopexy (CPT code 57425) if a previous graft (e.g., transvaginal mesh graft) is removed surgically at the time of a new sacral colpopexy graft placement. The relevant code is determined by the route of removal.

Report CPT code 10120 Incision and removal of foreign body, subcutaneous tissue-simple with a -78 modifier if mesh exposure is treated in the office within the 90-day global period.

Documentation:
Appropriate documentation of CPT code 57425 will include a description of the graft which was placed (brand name and manufacturer if a commercially available graft if used, or a description of the material and methods used to fabricate the graft if the surgeon fabricates his/her own graft at the time of surgery), as well as a description of the dissection and placement of each of the arms of the graft. There should be documentation of the anterior (i.e., vesicovaginal space) dissection, posterior (i.e., rectovaginal space) dissection, as well as how the graft was affixed to the anterior and posterior vaginal walls. Documentation should also include description of the presacral space dissection, as well as the means of fixation of the tail of the graft to the anterior longitudinal ligament of the sacrum.

Coding Pitfalls:
CPT code 57425 should not be used to report routine reattachment of the uterosacral ligaments to the vaginal cuff after completion of hysterectomy. This is considered a routine component of the hysterectomy procedure and cannot be separately coded.

CPT code 57425 is specific to vaginal suspensory procedures which involve placement of an artificial graft material to suspend the vagina from the sacrum. Suspension procedures which do not involve placement of a graft or which do not involve suspension from the sacrum should be reported with an alternative code. For example, laparoscopic uterosacral ligament fixation involves suspending the vaginal apex from shortened, plicated uterosacral ligaments in a manner analogous to the vaginal uterosacral ligament fixation. The preferred alternative code for such a procedure would be CPT code 58999 (unlisted procedure, female genital system, non-obstetrical) with reference to either CPT code 57283 (colpopexy vaginal, intraperitoneal) or perhaps 57270 (repair of enterocele, abdominal approach, separate procedure) if enterocele is present. A second alternative, use of the modifier -52 (reduced services) with CPT code 57425, is not recommended in this situation as the repair is not a limited portion of CPT code 57425, but a distinct procedure using different anatomic concepts to effect suspension of the vagina.

CPT code 57280 is an open surgical code for sacral colpopexy and is not appropriate to bill in the setting of a laparoscopic procedure. As with CPT code 57425 it is specific to a procedure which includes an artificial graft placed on the anterior and posterior vaginal walls and affixed to the sacrum. Open uterosacral ligament fixations, should be coded in a manner like that described in the preceding paragraph using an unlisted code and appropriate reference code.
