RESIDENT LEARNING OBJECTIVES

Submitted by the AUGS education committee: Kimberly Kenton, MD (chair) Sandy Valaitis, M.D; Mikio Nihira, M.D., MPH; Jeffery Clemons, M.D., LTC; Michael Vardy, M.D; Kenneth Powers, M.D.; Eric Jelovsek, M.D.; Karen Noblett, M.D

The committee endorses the ACGME Competency and Required Skills below as appropriate for Medical Students.
**Key:** Table for Medical Student Urogynecology learning objectives

- **1st column:** Learning objectives
- **2nd column:** Levels of Competence as define by GE Miller in *The assessment of clinical skills/competence performance.* (Acad Med 1990;65:S637-7) Abbreviations used in the second column for recommended levels of competence are:
  - **K** = knows
  - **KH** = knows how
  - **SH** = shows how
  - **D** = does

- **3rd column:** Evaluation Methods as described in the Accreditation Council for Graduate Medical Education (ACGME) and the American Board of Medical Specialties (ABMS) Toolbox of Assessment Methods. Version 1.1 September 2000. [www.acgme.org](http://www.acgme.org). Abbreviations used in the third column for suggested evaluation methods are:
  - **MCQ** = Multiple Choice Examinations
  - **SOR** = Standardized Oral

## Medical Student Urogynecology Learning Objectives

<table>
<thead>
<tr>
<th>Basic Sciences</th>
<th>Levels of Competence</th>
<th>Evaluation Methods</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>EMBRYOLOGY</strong></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Objective:** The resident should demonstrate an understanding of the development of the female urinary tract, lower reproductive tract, pelvic floor, and lower gastrointestinal tract and their interrelationships.

1. Understand the normal development of the bladder, urethra, vulva, vagina, rectum, and anal canal. 
2. Understand the temporal and anatomic embryologic interrelationships within the urinary tract, reproductive tract and lower gastrointestinal tract, and how mullerian and urinary anomalies develop and can coexist.
3. Understanding the relationship of the urogenital ridge and the subsequent development of the mature kidney, including the timing and progressive appearance of the three sets of excretory organs.
4. Understand the stages in growth and positioning of the mature kidney and ureters. K MCQ 2a, 2b
5. Understand the mechanisms responsible for the normal and abnormal development and positioning of the components of the female urinary, reproductive and lower gastrointestinal tracts.

| **ANATOMY**  |                      |                    |

**Objective:** The resident should demonstrate an understanding of the normal anatomy, anatomic interrelationships and variations of the bony pelvis, pelvic girdle and pelvic floor musculature, nerve supply, vasculature, lymphatic drainage, connective tissue supports and the pelvic viscera including the bladder, ureters, urethra, vagina, uterus, rectum, sigmoid colon, small bowel surrounding structures.

1. Understand the anatomic components and relationships of the pelvic organs. Understand the interplay between the bony pelvis, the three levels of vaginal support and levator ani muscle complex in maintaining a biaxial vagina
2. Understand the innervation, blood supply, and lymphatic drainage of these structures
3. Understand the changes in position and electromyographic activity of pelvic floor musculature at rest and with strain, sudden and sustained increases in intra-abdominal pressure, and voluntary muscle contraction.

4. Understand and be able to trace the course of the ureters from the kidney to the bladder and identify adjacent structures along their course in the context of common locations and mechanisms of operative injury.

5. Understand the anatomy of the retropubic, paravaginal, pararectal, and presacral spaces.

6. Understand the normal anatomy of the perineal body. Understand the anatomic relationships of the levator ani complex and anal sphincters in maintaining fecal continence.

<table>
<thead>
<tr>
<th>PHYSIOLOGY</th>
<th>Objective: The resident should demonstrate a working understanding of the normal function of the lower urinary tract during the filling and voiding phases, the factors responsible for anal continence, and the key elements involved in normal pelvic floor support.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Understand the reflex arcs responsible and basic neurologic circuits responsible for coordinated functioning and volitional control of the bladder and urethra.</td>
</tr>
<tr>
<td>2.</td>
<td>Understand the autonomic and somatic neurologic control of lower urinary tract function.</td>
</tr>
<tr>
<td>3.</td>
<td>Understand the normal voiding frequency and capacity using voiding diaries. Understand the urodynamic volume/pressure relationships of urethra and bladder during filling and emptying, including normal voiding mechanisms. Understand the methods of determining post-void residual (PVR).</td>
</tr>
<tr>
<td>4.</td>
<td>Understand the role of neurotransmitters and receptors in coordinated bladder and urethral function. Understand the concept of receptor specificity in anti-cholinergic therapy, and the side effect profile relative to receptor specificity. Understand the strengths and limitations of pharmacologic interventions to regulate lower urinary tract function.</td>
</tr>
<tr>
<td>5.</td>
<td>Understand the various elements of the functional sphincteric mechanisms of the urethra in controlling bladder/urethral pressure gradients during filling and emptying.</td>
</tr>
</tbody>
</table>
Understand the role of the pelvic floor musculature and the rationale for recommending pelvic floor muscle exercises and electrical stimulation therapies for both stress and urge urinary incontinence. Understand the effects of pharmacologic agents on urethral tone, and the rationale for various therapies, including topical estrogen, tricyclic antidepressants and alpha agonists.

6. Understand the neurologic control of the pelvic floor musculature and its role in maintaining pelvic floor support at rest, with voiding, defecation, and in response to both sudden and sustained increases in intra-abdominal pressure. Understand the use of EMG in this evaluation.

7. Understand the effects of vaginal delivery, lack of estrogen support, aging, obesity, health habits (like smoking, chronically straining at bowel movements, and chronic cough), and pelvic surgery on lower urinary tract function; pelvic floor connective tissue, muscle, and vascularity; and lower intestinal function.

<table>
<thead>
<tr>
<th>THE URINARY TRACT IN PREGNANCY</th>
</tr>
</thead>
<tbody>
<tr>
<td>Objective: The resident should demonstrate a thorough understanding of the morphologic and physiologic changes to the urinary tract in pregnancy. He/she should be able to demonstrate this understanding in the care of patients with symptoms or signs of urinary tract abnormalities and determine their significance in pregnancy.</td>
</tr>
</tbody>
</table>

1. In Pregnancy

2. Counsel the patient on the potential effects of vaginal delivery, including operative vaginal delivery and the use of episiotomies, on the function of the pelvic floor.

<table>
<thead>
<tr>
<th>URINARY TRACT DYSFUNCTION HISTORY AND PHYSICAL EXAMINATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>The resident should be able to perform a complete history and screening physical examination to evaluate lower urinary tract symptoms and signs.</td>
</tr>
</tbody>
</table>

Objective (History)

1. Understand revised ICS terminology as related to signs and symptoms of lower urinary tract dysfunction.

2. Evaluate the severity and extent of disability caused by symptoms. Understand the use of Quality of Life (QOL) measurement tools / questionnaires for urinary incontinence, anal incontinence, pelvic organ prolapse and sexual function.
3. Evaluate past medical and surgical histories as they might relate to urinary tract symptoms.  

| D | MCQ, OSCE, SP, KF 1a,b, 2a, 4b, 5c |

4. Evaluate the possible relationship of current medications to lower urinary tract symptoms.  

| D | MCQ, OSCE, SP, KF 1a,b, 2a, 4b, 5c |

5. Understand the relationship of other organ systems to lower urinary tract dysfunction  

| K | MCQ 2a,b |

6. Understand possible psychosocial and psychosexual relationships to lower urinary tract symptomatology.  

| K | MCQ 2a,2b, 5c |

### Objective (Physical Examination)

1. Perform a thorough physical examination including neurologic examination and evaluation of pelvic floor reflexes.  

| D | OSCE, SP, KF 1f |

2. Perform an exam to include PVR, POPQ, prolapse defect analysis and straining Q-tip determination for evaluation of urethral mobility and pelvic organ prolapse at rest and with Valsalva, recumbent and erect.  

| D | OSCE, SP, KF 1f |

3. Perform an evaluation of levator ani muscle tone at rest and during contraction  

4. Perform a cough stress test in the recumbent and standing positions to document the sign of stress urinary incontinence.  

| D | OSCE, SP, KF 1f |

### URINARY INCONTINENCE: GENERAL CONSIDERATIONS

**Objective**: Given a patient with a complaint of involuntary loss of urine, the resident should be able to confirm the symptom, diagnose its etiology, counsel the patient and initiate an appropriate treatment plan.  

1. Understand the different types of urinary incontinence, their causes, symptom complexes, physical findings, and distinctions. Understand the difference between symptoms (e.g., urge urinary incontinence, stress urinary incontinence, nocturnal enuresis), symptom syndromes (e.g., overactive bladder, painful bladder) and urodynamic diagnostic categories (e.g., detrusor overactivity, urodynamic stress incontinence, chronic urinary retention with incontinence).  

| K | MCQ, 2a, 2b |

2. Understand the minimum elements of an evaluation, including history of symptoms, past  

| K, KH | MCQ, OSCE, SP, KF |
medical history, PVR, urinalysis, urine culture and voiding diary. Understand the concept of empiric treatment of symptom syndromes. Understand the indications for and performance of the various urodynamic tests used to evaluate urinary incontinence, including provocative multichannel cystourethrometry, urethral pressure profilometry and pressure-voiding studies.

3. Understand the various medical and surgical approaches to specific types of urinary incontinence, and be able to provide an adequate spectrum for the majority of patients suffering from the more common of these conditions.

4. Recognize the economic impact of urinary incontinence in the United States.

5. Understand the psychological, social, and sexual impact of urinary incontinence.

**STRESS INCONTINENCE**

Objectives: The resident should understand the principles involved in the confirmation of the diagnosis of stress incontinence. He/she should know when referral for further evaluation is necessary and be able to perform appropriate management either nonsurgical or surgical once the diagnosis is established.

1. Know the definition of stress urinary incontinence versus urodynamic stress incontinence.

2. Understand the underlying anatomic abnormality that allows urinary loss in this condition.

3. Understand the various tests, their indications, limitations, and performance in establishing the diagnosis (e.g. Q-tip test, single-channel versus multi-channel cystometrogram, simultaneous bladder and urethral pressure measurements).

4. Know the various approaches, both nonsurgical and surgical, for the treatment of urodynamic stress incontinence. Understand the difference between traditional and minimally invasive surgical approaches, e.g. open Burch versus laparoscopic Burch, and traditional pubovaginal sling versus mid-urethral sling.

5. Know and be able to perform the various operative repairs appropriate to the treatment of urodynamic stress incontinence. (see Procedures. on page 16)
**URGE INCONTINENCE**

Objective: The resident should know the etiology, signs, symptoms, diagnosis, and treatment of detrusor overactivity

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>6. Understand the terms: urge incontinence and nocturnal enuresis as symptoms; overactive bladder as a clinical syndrome; idiopathic detrusor overactivity and neurogenic detrusor overactivity as urodynamic diagnoses, and synonyms.</td>
<td><strong>K</strong></td>
</tr>
<tr>
<td>7. Understand the pathophysiology of the condition.</td>
<td><strong>K</strong></td>
</tr>
<tr>
<td>8. Understand the clinical presentation of the condition and other conditions from which it must be distinguished.</td>
<td><strong>K</strong></td>
</tr>
<tr>
<td>9. Understand the diagnostic measures required to identify the condition, and their respective indications.</td>
<td><strong>K</strong></td>
</tr>
<tr>
<td>10. Understand the various treatment modalities, including fluid management, behavior modification, pelvic floor exercises, pharmacotherapy, and electrical stimulation. Understand the receptor specificity and side effect profile of respective anti-cholinergic agents.</td>
<td><strong>K,D</strong></td>
</tr>
<tr>
<td>11. Is able to discuss risks, benefits, and expected outcomes of nonsurgical and surgical management of urge incontinence.</td>
<td><strong>K,D</strong></td>
</tr>
</tbody>
</table>

**NEUROMODULATION**
1. Understand the indications for neurosacral modulation in the treatment of lower tract dysfunction, including recalcitrant detrusor overactivity, non-obstructive urinary retention and painful bladder syndrome.

2. Understand the theory of the mechanism of neuromodulation.

3. Understand the alternative techniques available, including posterior tibial nerve stimulation and pudendal nerve stimulation

**MIXED URINARY INCONTINENCE**

Objective: The resident should understand the principles involved in the diagnosis and treatment of mixed incontinence.

1. Understand the definition of mixed urinary incontinence.

2. Understand the combination of underlying abnormalities leading to this condition.

3. Understand the clinical presentation of the condition and other conditions from which it must be distinguished.

4. Understand that a mixed condition may require a mixture of treatments for optimal bladder control (i.e. treatment of stress and urge components). These modalities may include pelvic floor muscle exercises with or without biofeedback, electrical stimulation, pharmacotherapy, and/or surgical repair.

5. Describe the possible outcomes of initial treatment (i.e. S + U both better; S better, U the same or worse; S the same or worse, better; S + U both unchanged or worse), and how to adjust treatment to treat the persistent symptoms.

**VOIDING ABNORMALITIES**

Objective: The resident should be able to recognize and understand the management of abnormal voiding, including urinary retention with associated urinary incontinence.

1. Understanding the normal mechanisms of voiding in women

2. Understand the terminology related to mechanism of voiding, including valsalva voiding, and post-void residual.

3. Understand the various definitions of a normal PVR.

4. Understand the pathophysiology of abnormal voiding, including urethral obstruction and detrusor hypoactivity.
5. Understand the relationship between pelvic floor surgery and postoperative voiding difficulties. Understand the clinical presentation of abnormal voiding. Understand the terminology for symptoms of abnormal voiding, including intermittency, hesitancy, straining, incomplete emptying and dribbling. Understand the complications associated with urinary retention.

6. Understand the evaluation of abnormal voiding, including simple and complex uroflowmetry, and pressure-voiding studies. Understand the urodynamic categories of bladder outlet obstruction, detrusor sphincter dyssynergia, detrusor underactivity and acontractile detrusor.

7. Understand the various treatments used for this condition and their risks and benefits, including intermittent self-catheterization, double voiding, Crede maneuver, cholinergic drugs and sacral neuromodulation.

---

**URINARY TRACT INFECTION**

Objective: The resident should be able to diagnose and treat acute, persistent and recurrent infection of the urinary tract in both pregnant and non-pregnant women.

1. Understand terminology (e.g. asymptomatic bacteriuria, sterile pyuria, persistent infection, recurrent infection)

2. Understand pathophysiology (e.g. host responses, age relationship, urinary retention, influence of pregnancy, etc.)

3. Understand the relationship between host susceptibility factors, anatomy, and bacterial virulence factors as they relate to infection risk and renal involvement.

4. Understand clinical presentation (e.g. influence of site of infection upon clinical picture, difference between complicated and uncomplicated infections)

5. Understand methods and significance of diagnostic techniques and indications for in-depth evaluation

6. Understand modes of therapy for acute and chronic infection.

7. Understand indications for and methods of prophylaxis for recurrent disease.
1. Understand the ICS terminology of painful bladder syndrome, and differentiate this form other pain syndromes, eg painful urethra / vulva / vagina / pelvis syndromes.
2. Understand signs and symptoms of painful bladder syndrome. Understand the role of graded questionnaires in the evaluation.
3. Understand the indications for endoscopy and radiologic studies in the evaluation.
4. Understand the various proposed mechanisms of pathophysiology, including epithelial GAG layer disruption, potassium permeability, and neuropathic.
5. Understand the treatment modalities available, including intra-vesical instillations, oral re-coating therapy, analgesics and neuromodulation. Understand the indication and success of operative intervention, such as augmentation cytoplasty, ileal diversion and cystectomy.

**URETHRAL DISORDERS**

Objective: The resident should demonstrate the ability to diagnose and manage conditions referable to the urethra.

<table>
<thead>
<tr>
<th>1. Understand the definitions of painful urethral syndrome, infectious urethritis, atrophic urethritis, urethral prolapse and urethral diverticulae.</th>
<th>K</th>
<th>MCQ 2a, 2b</th>
</tr>
</thead>
<tbody>
<tr>
<td>2. Understand pathophysiology infectious urethritis, atrophic urethritis, urethral caruncle and urethral diverticulae.</td>
<td>K</td>
<td>MCQ 2a, 2b</td>
</tr>
<tr>
<td>3. Understand clinical presentation of infectious and noninfectious urethritis, atrophic urethritis, urethral prolapse and urethral diverticulae</td>
<td>K</td>
<td>MCQ 2a, 2b</td>
</tr>
<tr>
<td>4. Understand role of urethral cultures, endoscopy and radiologic studies in the evaluation of urethral disorders.</td>
<td>K</td>
<td>MCQ 2a, 2b</td>
</tr>
<tr>
<td>5. Understand methods of prophylaxis and treatment, both medical and surgical, and their indications and contraindications.</td>
<td>K</td>
<td>MCQ 2a, 2b</td>
</tr>
</tbody>
</table>

**INTRAOPERATIVE INJURIES**

Objective: The resident should demonstrate an ability to prevent, identify, and manage urinary tract injuries which occur during pelvic surgery. He/she should show an understanding of appropriate surgical repair of these injuries, although he/she may not always be responsible for performing these repairs.
1. Understand the normal and variant anatomical relationships of the ureter, bladder, and urethra to the female reproductive tract.  
   **K**  
   MCQ 2a, 2b

2. Demonstrate the accepted precautions necessary to prevent urinary tract injury.  
   **D**  
   MCQ, OSCE, OSAT 1f, 2a, 2b

3. Enumerate the investigations used to diagnose urinary tract injury both intraoperatively and postoperatively  
   **D**  
   MCQ 2a, 2b

4. Describe, perform or call for consultation the management of these injuries when discovered immediately at the time of surgery based on location of injury status of operative field (e.g. Infection, malignancy), and condition of the patient.  
   **D**  
   MCQ, OSAT, SP, KF 2a, 2b

5. Describe, perform or call for consultation the management of urinary tract injury when discovered in the postoperative period or later.  
   **D**  
   MCQ, OSCE, SP, KF 2a, 2b

### URINARY TRACT FISTULAE
Objectives: The resident should demonstrate knowledge of the etiology, prevention, recognition, diagnosis, and management of fistulae involving the urinary tract.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| 1. Understand the difference between congenital and acquired lesions | **K**  
   MCQ 2a, 2b |
| 2. Understand the risk factors for the formation of acquired urinary tract fistulae. Understand methods of preventing or minimizing the influence of these factors. | **K**  
   MCQ 2a, 2b |
| 3. Understand the classification of urinary tract fistulae including vesicovaginal fistulae, ureterovaginal fistulae, urethrovaginal and uterovaginal fistulae and how to identify and diagnose the types. | **KH**  
   MCQ, KF, OSAT 2a, 2b |
| 4. Know the clinical presentation of a urinary tract fistula | **K**  
   MCQ, OSCE, SP 2a, 2b |
| 5. Understand the evaluation of fistula tracts. Understand the role of office tests in the evaluation. Understand the indications for cystoscopy and radiologic studies in the evaluation. | **K**  
   MCQ 2a, 2b |
| 6. Understand the treatment approaches to urinary tract fistulae based upon etiology, size, and location. Understand the use of vascularized grafts, both vaginal and abdominal, in select patients. | **K**  
   MCQ 2a, 2b |

### HEMATURIA / NEOPLASIA
Objective: The resident should be able to screen for and...
evaluate hematuria, and be aware of the potential for urinary tract neoplasia in the female patient.

1. Understand the definition of hematuria and microhematuria, and their relationship to RBC’s versus dipstick on the urinalysis.  
2. Understand the clinical presentation of the various lesions that can cause hematuria, both benign and malignant.  
3. Understand the steps in evaluation of hematuria. Know the indications for referral to evaluate focal lesions.  
4. Understand the management of these lesions.

**PELVIC ORGAN PROLAPSE PATHOPHYSIOLOGY**
Objective: The resident should demonstrate an understanding of the prevalence, etiology, predisposing factors, and symptomatology associated with pelvic organ prolapse.

1. Understand the normal support of the vagina (Levels I, II, and III), uterus, bladder, and rectum.  
2. Understand the anatomic and structural factors associated with pelvic organ prolapse.  
3. Understand the neuromuscular changes in the pelvic floor associated with genital prolapse.  
4. Understand the relationship of childbearing, age, hormonal factors, and genetic factors to pelvic organ prolapse.  
5. Understand the anatomic and symptomatic consequences of abnormal pelvic floor support.

**DIAGNOSIS**
Objective: The resident should be able to identify, stage the severity of, and discern the symptomatology associated with pelvic organ prolapse.

1. Understand the anatomy of various anterior vaginal wall defects, including midline, lateral, and transverse cystocele and anterior enterocele.  
2. Understand the anatomy of various defects in uterine support, including attenuated cervical ligaments, detachment of the pubocervical ring, cervical elongation and combined defects. Understand the anatomic defects associated with post-hysterectomy apical prolapse, including vault detachment, apical enterocele, anterior enterocele, posterior enterocele and
3. Understand the anatomy of various posterior vaginal wall defects, including rectocele, perineal descent, and posterior enterocele.  
4. Understand the anatomy of different perineal defects, including bulbocavernosus muscle attenuation, external anal sphincter defects, recurrent fourth degree lacerations, and cloaca.  
5. Understand the criteria for staging of pelvic organ prolapse according to the International Continence Society (ICS) grading system and how it compares with the other classification systems.  
6. Perform a pelvic organ prolapse assessment according to the POP-Q guidelines.  
7. Know the symptoms associated with various types and increasing stage of pelvic organ prolapse  
8. Recognize the frequent disparity between objective anatomic findings and clinical symptoms

### TREATMENT OF PELVIC ORGAN PROLAPSE

**Objective:** The resident should be able to identify the patient requiring treatment and establish a plan of treatment for the patient with pelvic organ prolapse.

<p>| | |</p>
<table>
<thead>

</tr>
</tbody>
</table>

**Fecal Incontinence**
Objective: The resident should be able to demonstrate an understanding of the prevalence, etiology, predisposing factors, symptomatology, and management of fecal incontinence.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| 1. | Understand the different types of fecal incontinence, including anal incontinence, their causes, symptom complexes, physical findings, and distinctions. **K**
| 2. | Understand the functional, anatomic, and neurologic abnormalities which may be associated with fecal incontinence. Including the role of stool consistency, colon transit time, anorectal sensation, the coordination of rectal emptying with pelvic floor muscle relaxation, and anorectal muscle tone in the maintenance of fecal control. **K**
| 3. | Understand the autonomic and somatic neurologic control of anorectal function. **K**
| 4. | Understand the use and limitations of physical |
examination, indications for anal manometry, pudendal nerve terminal motor latencies, anal sphincter electromyography, and radiographic imaging studies.

### TREATMENT OF FECAL INCONTINENCE

1. Understand the role of paralytic agents, dietary modification, bulking agents, paralytic agents, pelvic floor physiotherapy, electrical stimulation therapy and enemas used in the management of anorectal incontinence.

2. Understand the indications, risks and benefits, and success of various surgical approaches to specific types of fecal incontinence, including overlapping anal sphincteroplasty, gracilis muscle transposition, artificial anal sphincter. Role of newer available surgical options (sacral modulation) in treating patients with fecal incontinence. (Dis Colon Rectum 2004 Aug;47(8), 1350-7. Indications for diversion colostomy for patients with recurrent fecal incontinence after failed surgery.

3. Counsel the patient on the cost, risks and benefits and expected outcome for nonsurgical and surgical management of fecal incontinence.

4. Recognize the economic impact of fecal incontinence in the United States.

5. Understand the psychological, social, and sexual impact of fecal incontinence.

### GASTROINTESTINAL TRACT FISTULAE

Objective: The resident should demonstrate an understanding of the prevalence, etiology, predisposing factors, prevention, recognition, symptomatology, diagnosis and management of gastrointestinal tract fistulae.

1. Understand factors leading to the formation of gastrointestinal tract fistulae including the role of vaginal delivery, abdominal pelvic surgery, diverticular disease, inflammatory bowel disease, neoplasm and radiation.

2. Understand methods of preventing and minimizing the influence of these factors.

3. Understand the classification of gastrointestinal tract fistulae including enterocutaneous, enterovaginal, colovesicular, colovaginal, and rectovaginal fistulae and how to identify and diagnose the types.

4. Know the clinical presentation of GI tract fistulae.
5. Understand the treatment approaches to GI tract fistulae based upon etiology, size and location. Describe the surgical and nonsurgical management of rectovaginal fistulae including how to decide on the approach eg. abdominal, vaginal, transanal, transperineal or a combination. Understand the use of diverting colostomy.

**DEFECATION DISORDERS AND CONSTIPATION**

Objective: The resident should demonstrate an understanding of normal bowel function and how abnormal bowel function relates to other pelvic floor path physiology.

1. Understand normal bowel function from ingestion to defecation. **K**

2. Understand the conditions of constipation, defecation disorder, irritable bowel syndrome, nonrelaxing puborectalis, intussusception and rectal prolapse. **K**

3. Understand the relationship between defecation disorders, perineal descent, pelvic organ prolapse, rectal prolapse and neuromuscular function of the pelvis. **K**

4. Understand the role of stool consistency, colon transit time, anorectal sensation, the coordination of rectal emptying with pelvic floor muscle relaxation, and anorectal muscle tone in the maintenance of normal bowel function from ingestion to defecation. **K**

5. Understand the use of physical examination, anal manometry, pudendal nerve terminal motor latencies, sphincter electromyography, and radiographic imaging studies, including defacography and transit studies, in the evaluation of constipation and defecation disorders. **DK**

**TREATMENT OF DEFECATION DISORDERS AND CONSTIPATION**

1. Understand the non-surgical techniques for prevention and treatment of defecation disorders and constipation, including, bowel stimulating agents, bulking agents, pelvic floor physiotherapy, enemas, dietary modification, promotion of improved bowel habits, and electrical stimulation. **K**

2. Counsel the patient on the cost, risks and benefits and expected outcome for nonsurgical and surgical management of constipation. **D**

3. Recognize the economic impact of constipation in the United States. **K**
**FEMALE SEXUAL FUNCTION**

Objective: be able to demonstrate an understanding of the normal female sexual function and how abnormal sexual function relates to other pelvic floor pathophysiology.

1. Understand the normal biologic sexual response in woman as it relates to the genital and extragenital sexual structures.

2. Be able to discuss the role of psychological and biological factors in a woman’s sexual response.

3. Be able to compare and contrast the model by Masters, Johnson and Kaplan to the biopsychosocial model of Basson.

4. Understand the role of neurotransmitters and receptors in normal sexual function including estrogen, total and free testosterone, SHBG, DHEA and PDE-5.

5. Understand the use of Quality of Life (QOL) questionnaires.

6. Understand the affect of pelvic organ prolapse, incontinence and pelvic pain on sexual function.

---

**FEMALE SEXUAL DYSFUNCTION**

Objective: The resident should demonstrate an understanding of the prevalence, etiologies, predisposing factors, recognition, symptomatology, diagnosis and management of female sexual dysfunction.

1. Understand the international consensus development conference classification of female sexual

2. Understand the treatment approaches to FSD based on the classification.

3. Understand the various treatment modalities including psychotherapy, couples counseling, behavioral modification, physical therapy, various devices and lubricants and the indications for pharmacotherapy including its strengths and limitations.

4. Be able to take a complete history including sexual, psychosocial and medical and perform a complete physical exam as it relates to sexual function.

5. Understand the use and limitations of the physical examination, Quality of Life questionnaires and laboratories tests in the diagnosis and management. Be able to develop an individualized treatment plan including when...
to refer for further evaluation.

**PROCEDURES**

**URODYNAMIC EVALUATION**

**OBJECTIVE:**
The resident should understand the methodology of the various urodynamic evaluations, the information each can provide, and the limitations attached to each study. He/she should be able to put together a minimum workup for a patient presenting with lower urinary tract complaints. The resident should understand:

- terminology
- various methods, instruments, media, and techniques for performing the test
- the information of value to be gleaned from the test
- the limitations of the test
- the differences between static and dynamic use of the method, including performance of the study in various positions
- significant controversies in the interpretation or usefulness of the test when the problem encountered is beyond the scope of the test and what to do next.

**PRIMARY ANTI-INCONTINENCE PROCEDURES**

1. Understand and perform an open retropubic suspension. Understand the various laparoscopic approaches to retropubic urethropexy. Understand and perform the Tanagho modification.

2. Understand the difference between a pubovaginal and mid-urethral sling. Understand and perform a mid-urethral sling, using either a retropubic or trans-obturator approach.

3. Understand a urethral bulking procedure.

**APICAL VAGINAL SUSPENSION WITH HYSTERECTOMY**

1. Understand and perform an open abdominal uterosacral reattachment. Understand the laparoscopic uterosacral reattachment. Understand the various approaches to cul de sac obliteration.

2. Understand and perform a vaginal uterosacral suspension. Understand the use of cul de sac obliteration.
3. Understand an abdominal sacrocolpopexy, using both open and laparoscopic approaches. **KH**

4. Understand a sacrospinous ligament suspension, using both unilateral and bilateral approaches. **KH**

5. Understand an iliococcygeus fascia suspension. **KH**

**APICAL VAGINAL SUSPENSION WITH UTERINE SUSPENSION**
1. Understand the traditional procedures for uterine suspension, eg round ligament suspension, Manchester procedure, LeFort partial colpocleisis and uteropexy. **KH**

**APICAL VAGINAL SUSPENSION AFTER PRIOR HYSSTERECTOMY**
1. Understand the vaginal versus abdominal versus combined approaches. Understand the use of cul de sac obliteration and graft augmentation. **KH**

**ANTERIOR COMPARTMENT REPAIRS**
1. Understand and perform an anterior colporrhaphy. **D**

2. Understand and perform an open abdominal paravaginal repair. Understand a laparoscopic paravaginal repair. **D, KH**

3. Understand a vaginal paravaginal repair. **KH**

**POSTERIOR COMPARTMENT REPAIRS**
1. Understand and perform a posterior colporrhaphy, and differentiate from a site specific repair. **D**

2. Understand and perform a perineorrhaphy. **D**

3. Understand a vaginal paravaginal repair. **KH**

4. Understand an external anal sphinteroplasty. Understand a cloaca repair. **KH**

**COLPOCLIESIS**
1. Understand a colpocleisis. Understand the difference between a partial and complete colpocleisis. **KH**

**CYSTOSCOPY**
1. Understand and perform a cystoscopy. Be able to identify the normalanatomic landmarks, and abnormal lesions. **D, KH**

2. Understand a hydrodistension procedure for Chronic Interstitial Cystitis. **KH**

3. Understand a bladder biopsy. **D**
