Introduction

Thank you for joining AUGS SUI Surgery Registry Module, part of the AQUIRE registry network. The SUI Surgery Registry Module is a part of the Women’s Health Technologies Coordinated Registry Network, a project of MDEpiNet. For more information about MDEpiNet and the WHT CRN, please click here:

http://mdepinet.org/womens-health-crn/

The SUI Surgery Registry Module is intended to be a quality improvement project to help you improve the care you provide to patients. In the future, we envision both increasing our partnerships with industry to promote safe, effective devices, and the development of true quality measures based on gaps in care identified by the Module. We’re depending on you and your team for this registry to be successful! In this manual you will find a description of the workflow of the registry and detailed instructions for each step along the way, as well as copies of information you can share with your patients, and links to access additional resources. We have also provided a FAQ section at the end with commonly asked questions. Click any one of the topics in the table of contents to visit that section.

News and updates about the SUI Surgery Module as well as all resources listed in this manual, are posted to the SUI Surgery Module Member Community. If you are not a member, please email aquire@augs.org to be added to the group. Additional information and resources can also be found on AUGS website in the SUI Surgery Module section:

If at any time you have questions or need additional information, please contact Colleen Skau at aquire@augs.org.
Overview of Timeline

SUI Workflow for Patient Feedback form

- Patient surveys are timed from the Surgery Visit; Consulting Visit can happen at any time and does not affect when patient surveys are sent

Day 0: Day of Surgery

Day 35 (5 weeks after surgery): Patient Feedback link sent to patients

Day 42 (6 weeks after surgery): The patient is due to come back for Follow-Up Visit; provider is instructed to ask the patient if she has completed survey, and provider completes Follow-Up Visit form

Day 56 (21 days after Patient Feedback form opens): Send reminder to the patient if she hasn’t completed survey

Day 63 (2 days before Patient Feedback form closes): Send text reminder to the patient if she hasn’t completed the survey

Day 65 (30 days after Patient Feedback form opens): Patient Feedback form closes

Day 358 (1 year minus 1 week after surgery): Patient Feedback link sent to the patient for one-year feedback

Day 365 (1 year after surgery): The patient is due to come back for Follow-Up Visit; provider is instructed to ask the patient if she has completed survey, and provider completes Follow-Up Visit form

Day 379 (21 days after Patient Feedback form opens): Send reminder to the patient if she hasn’t completed survey

Day 386 (2 days before Patient Feedback form closes): Send text reminder to the patient if she hasn’t completed the survey

Day 388 (30 days after Patient Feedback form opens): Patient Feedback form closes

SUI Workflow for Surgeon Questionnaire form

Day 0: Day of Surgery

Day 42: Surgeon Questionnaire becomes active (notification displays on dashboard when provider has available questionnaires)

Day 365: Surgeon Questionnaire for one-year feedback becomes active (notification displays on dashboard when provider has available questionnaires)

-Surgeon Questionnaire does not close and surgeons do not receive regular reminder emails
Inclusion/Exclusion Criteria

**Inclusion Criteria:** The patient must be:

- Over the age of 18
- Female
- Diagnosed with Stress Urinary Incontinence or Mixed Urinary Incontinence
- Planning surgical treatment for SUI/MUI (with or without concomitant surgeries)

**Exclusion Criteria:** The patient may NOT be included if she:

- Has a history of known or suspected pelvic malignancy
- Has a history of pelvic radiation
- Is unwilling or unable in the opinion of the provider to answer questions about her health
- Is diagnosed solely with urgency urinary incontinence (UUI)
- Intends only non-surgical management of her SUI (i.e. Kegel exercises, pessary)

**Notes:**

- Patients who do not have regular email access should be offered the chance to complete the survey on a computer/tablet in the office if possible
- Patients who decline the electronic questionnaires should still be enrolled in the registry (see page 10 or page 30 for instructions on how to unsubscribe the patient) for quality improvement purposes
- Informed consent/IRB approval is NOT needed for the SUI Surgery Module, as it is a quality improvement project
Adding a New Patient

1. Log into the AQUIRE registry by navigating to https://aquire.augs.org/Dashboard/login.aspx and selecting Dashboards from the dropdown. Enter your username and password (same as your AUGS username).

2. Click on the SUI Module link on the left-hand side
   a. Group practices only: click on the Select Provider box and choose appropriate provider name
   b. System allows separate accounts for provider and admin/provider surrogate

3. Patient Dashboard appears:

4. Click Add New Patient in the lower right; Add New Patient dialog box appears:

5. Enter patient info and click Proceed to Visit Information. Note that boxes with a red asterisk are required.

6. Add Visit Information box appears:

7. The first visit for the patient is usually a Consulting Visit (continue to next page)
Visit 1: Consulting Visit

A Consulting Visit is the first time you encounter the patient, or any time she returns to discuss a procedure you have not yet performed (if the patient decides to have a second surgery, the pre-op visit for that surgery is a second Consulting Visit).

A provider can enter unlimited Consulting Visits and a Consulting Visit is not required to enter a Surgery Visit. The first tab of the Surgery Visit is the same as the Consulting Visit.

1. If proceeding from entering a new patient, the Add Visit Information appears automatically after the patient info is completed (see previous page)
2. If adding a new visit to an existing patient, click on the green plus next to the patient on the dashboard:

3. The Add Visit Information window opens; select Consulting Visit and enter Date of Visit. The rest of the visit info opens once date has been completed:
4. Complete the first 14 questions; note that questions with a red asterisk are required.
5. The final four questions, denoted with **ICIQ-UI**, are to be answered by the patient. Providers can ask the patient the question verbally or have the patient complete a paper questionnaire (downloadable on the SUI Surgery Module website).
6. Click **Save and Close** at the bottom right; the Visit Information dialog box appears with the new visit added.

Consulting Visit info can be updated at any time as needed.
Visit 2: Surgery Visit

The Surgery Visit is for any surgical procedure done on the patient, including slings, bulking agents and Burch procedure. A provider can enter unlimited Surgery Visits for repeat surgeries. The first tab of the Surgery Visit is identical to the Consulting Visit and will autopopulate from the Consulting Visit but can be updated if needed.

Completing the Index Surgery tab of a Surgery Visit will trigger a patient survey (unless the patient opts out) and a provider survey. The patient survey will be automatically emailed to the patient 5 weeks post-surgery (see page 16) and the provider survey will be available on the dashboard 6 weeks post-surgery (see page 19).

After surgery, the patient should be given the Patient Information Card (downloadable from the SUI Surgery website) with information about the survey she will receive. Please also have available a copy of the Patient Information fact sheet in case of questions but fact sheet does not need to be distributed to patients. See page 27 for full instructions and the Visit Checklist.

**Important Note:** some parts of the Surgery Visit cannot be changed once they are saved, particularly the Device Information tab. Please make sure you have entered the correct information before saving the form.

1. If adding a Surgery Visit immediately after adding a Consulting Visit, click **Add New Visit** in the lower right of the Visit Information dialog box:

2. If adding a Surgery Visit to an existing patient, click on the **green plus** next to the patient on the dashboard:
3. The Add Visit Information window opens; select Surgery Visit and enter Date of Visit. The rest of the visit info opens once date has been completed:

4. Note that in addition to the Demographics and History tab (identical to the Consulting Visit), the Index Surgery tab appears at the top. Additional tabs may appear depending on which surgery is selected. The Demographics and History tab will autopopulate based on the Consulting Visit info but can be updated as needed.

5. The system automatically emails a patient survey to patients 5 weeks after surgery; if a patient specifically requests to opt out of the survey, uncheck the box in the upper right.

6. Complete the Index Surgery tab with basic questions about the procedure; answering some questions in the affirmative will open additional questions:
a. Note that boxes with a red asterisk are required. The form cannot be saved if required information is not completed.

7. If Type of incontinence procedure performed is **Pubovaginal Sling** or **Burch Procedure**, form is complete. Click **Save and Close.** Proceed to page 15 to continue.
   If Type of incontinence procedure performed is **Midurethral Sling** or **Periurethral Bulking Agent**, proceed to the next page.
   **Note:** you will NOT be prompted to enter the Device Information tab, it will appear at the top depending on selection from dropdown box.
8. If Type of incontinence procedure performed is **Midurethral Sling** or **Periurethral Bulk Agent**, a new tab opens for Device Information:

9. Choose a manufacturer from the dropdown box. A diagram of the product barcode appears indicating where to find the UDI and Lot Number.
10. Complete the UDI and Lot Number fields in the Device Information tab and click Fetch Details.

11. All other information in the tab is completed automatically based on the information in the FDA AccessGUDID database (https://accessgudid.nlm.nih.gov/)
   a. Note: Information on this page (other than UDI and Lot Number) cannot be edited.
12. Once Device Information is complete, click **Save and Close**

a. **Important Note:** once the Device Information tab is saved, it **CANNOT** be edited. Please ensure that information is correct before saving!

13. Visit Information dialog box appears again with Surgery Visit added:

**Editing/Inactivating Visits**

1. To edit visit information click on the **Edit icon** in the patient list:
2. Select the visit to be edited by clicking on the **blue hospital** next to the visit (clicking on the visit name will not do it)

3. To inactivate a visit (i.e. the patient decides against surgery after surgery visit form has already been started), open the Visit Information dialog box by clicking on the **Edit** icon in the patient list

4. Select the visit to be inactivated by clicking the **Yes/No** slider next to the visit and confirm in the dialog box
   a. **Note:** an inactivated visit **cannot** be reactivated; data in inactive visits can still be viewed but cannot be edited
   b. Inactivating a Surgery Visit will inactivate the whole visit, including any associated Unscheduled Visits, Surgeon Questionnaires and Patient Feedback forms

5. If the patient withdraws from the registry (voluntarily or involuntarily), the entire patient can be inactivated by clicking the **Active Status Yes/No** slider on the patient list
   a. **Note:** an inactivated patient **cannot** be reactivated; data for the inactive patient can be viewed but cannot be edited
   b. Inactivating the patient will inactivate all visits; all patient emails will cease and no further surgeon questionnaires will be available
Follow Up 1: 24 Hour Call

The patient should have received a card with information about the survey (including the date she should receive it) immediately after surgery. See page 3 for Timeline overview.

For sites that call patients 24 hours after surgery, please remind the patient of the following information:

- In 5 weeks she will receive an email from suicommunity@augs.org inviting her to complete a brief survey about her surgery and how she is feeling
- The survey is open for 30 days and she will receive two reminders
- Once she submit data, she cannot edit it and she can only take the survey once
- Her personal information is fully protected and completely confidential, and will not be shared with anyone other than their healthcare provider
- Her surgeon may see her answers but no one can edit the answers; any information she enters is secure

Also on the card is information about how to access the SUI Surgery Patient Community on AUGS Voices for PFD website (access instructions are also available on the Patient Information fact sheet and on the SUI Surgery website). If the patient has any questions about the survey or the patient community, she should contact AUGS at suicommunity@augs.org.
Follow Up 2: Six Week Visit

Patient Feedback Survey

The patient receives the first survey invitation at 5 weeks post-surgery (see Timeline on page 3). If the patient returns to the office 6 weeks after surgery, provider should check whether the patient has completed survey:

1. Click on Edit icon in patient list:

2. Click on the blue hospital icon next to the appropriate Surgery Visit:

3. Tabs are shown at the top; if the Patient Feedback tab is shown, the patient has completed her questionnaire. If it is not shown, she has not completed it:
4. If no Patient Feedback tab shows at the top, remind the patient to look for the email (from suicommunity@augs.org) and remind her to complete the questionnaire
   a. Additional concerns can be addressed with Patient Information fact sheet or providing the patient an additional card
   b. Note: the patient receives two simultaneous emails: one has a link to the survey, the other has a one-time password for the survey (to prevent duplicate completion). The patient cannot access the survey without the password
   c. Link takes the patient to a temporary dashboard:
5. The patient must click **Submit** and confirm submission; Save does not submit data

6. Reminder: although patient feedback is shown in Surgery Visit, provider cannot edit patient feedback so the patient cannot complete questionnaire through the provider dashboard
Surgeon Questionnaire

Surgeon Questionnaires become available 6 weeks post-surgery and do not have a closing date (see Timeline on page 3).

1. Available questionnaires will show as a pop-up notification on the dashboard when they become available. To access surgeon questionnaires at a later date, click on the **Notifications** tab next on the dashboard next to the Patients and Provider Surrogate tab.

2. To access Surgeon Questionnaires for editing, click on the **Edit** icon in the patient dashboard:

3. Click on the **blue hospital** icon next to the appropriate Surgery Visit:

4. Tabs are shown at the top; Surgeon Questionnaire tab will display at 6 weeks and can be edited any time after that.
   a. Note that boxes with a red asterisk are required. The form cannot be saved if required information is not completed.
Note: Patient Feedback and Surgeon Questionnaires vary with the procedure performed. Only procedures involving slings will be queried regarding mesh exposure.

5. **Click Save and Close**
Unscheduled Visit

Unscheduled Visits are intended as follow up visits that do not occur at 6 weeks or 1 year. Any time the patient returns with concerns about a previous SUI surgery, the Unscheduled Visit should be used (do not use if a patient has concerns only about a concomitant procedure). If the patient opts for additional surgery, a new Consulting Visit and Surgery Visit form should be completed.

1. To add an Unscheduled Visit, click on the green plus next to the patient on the dashboard:

2. Enter Visit Date and choose date of associated surgery (all Unscheduled Visits must be associated with an existing surgical visit and must be after that surgery date):
3. Complete the reason for visit and other questions  
   a. Note: reason for visit can be as long as required and can contain any relevant information to the visit or the patient’s history with the procedure  
   b. If sling/mesh questions are not applicable, answer Not Applicable from the dropdown. If the patient cannot remember or does not know, answer Unknown  

4. The patient can have as many Unscheduled Visits as needed associated with a Surgery Visit  

5. Click **Save and Close**; visit will appear in the Visit Information dialog box:  

![Visit Information](image)

**Note:** if a Surgery Visit is inactivated (data can no longer be added or edited), all accompanying Unscheduled Visits will also be inactivated and no further Unscheduled Visits can be added for that Surgery Visit
Follow Up 3 (and Beyond): 12 Month Visit

Patient Feedback Survey

The patient receives a survey invitation at 1 year minus 1 week post-surgery (51 weeks; see Timeline on page 3). If the patient returns to the office 1 year after surgery, provider should check whether the patient has completed survey:

1. Click on **Edit** icon in patient list:

2. Click on the **blue hospital** icon next to the appropriate Surgery Visit:

3. All patient feedback is shown within the same tab (6 week, 1 year, etc). Click on the **Patient Feedback** tab at the top and scroll down to see if Post-Operative Questionnaire is present:
4. If the patient has only completed Perioperative Questionnaire (or if no Patient Feedback tab shows at all), remind the patient to look for the email (from suicommunity@augs.org) and remind her to complete the questionnaire
   a. Additional concerns can be addressed with Patient Information fact sheet or providing the patient an additional card
   b. Note: the patient receives two simultaneous emails: one has a link to the survey, the other has a one-time password for the survey (to prevent duplication completion). The patient cannot access the survey without the password
   c. One year follow-up survey asks some of the same questions (ICIQ-UI) as the Consulting Visit

5. If the patient continues to fill out surveys in subsequent years, additional questionnaires will appear below

6. All patient questionnaires close 30 days after they open, and the patient always receives two reminders within the 30 days
Surgeon Questionnaire

Surgeon Questionnaires become available 6 weeks post-surgery and do not have a closing date. See Timeline on page 3.

1. Available questionnaires will show as a pop-up notification on the dashboard when they become available. To access surgeon questionnaires at a later date, click on the Notifications tab next on the dashboard next to the Patients and Provider Surrogate tab.

2. To access Surgeon Questionnaires for editing, click on the Edit icon in the patient dashboard:

3. Click on the blue hospital icon next to the appropriate Surgery Visit:

4. Select the Surgeon Questionnaire tab at the top

5. Scroll down past the Perioperative questionnaire (6 week) to the Post-Operative questionnaire:
6. Complete the questions as required; if data was not collected or patient does not remember, answer Unknown as needed

7. Click **Save and Close**
   a. Note: Surgeon Questionnaires can be edited at any time and do not close
Visit Checklist

Consulting Visit:
1. Collect patient demographics and medical history: patient must complete the 4-question ICIQ in the office
2. Discuss registry with the patient; provide Patient Information fact sheet if needed
3. The patient does not have to sign a consent form—filling out surveys is implied consent

Surgery Visit:
1. Update patient demographics and medical history if needed
2. Collect surgery details including device packaging/UDI or save packaging for later entry
3. Send the patient home with patient information card (including date they should receive email)

24-Hour Follow Up Call:
1. Remind the patient they will receive an email in 5 weeks. Sample script:

   In 5 weeks you will receive an email inviting you to take a brief questionnaire about your surgery and how you’re feeling. Taking the survey in no way affects the care you receive but will improve the surgery experience for thousands of other women just like you. Your data is confidential; no one will see your answers but possibly your provider, so we ask you to be completely honest. Your personal information is secure and will not be shared with anyone.
   If you have questions about the survey, please feel free to contact us at suicommunity@augs.org (sites can give Colleen Skau’s email address skau@augs.org or the email address listed on the survey) and thank you for your participation!

Six-Week Follow Up
1. Ask the patient if she has completed the survey; if she has not, ask her if she can take 5 minutes to do it right now or if she has any questions
   - If the patient does not remember receiving the email, ask her to look for the reminder, which will come from suicommunity@augs.org and provide another card if needed
2. Complete the Surgeon Questionnaire at 6 weeks

One Year Follow Up
1. Ask the patient if she has completed the survey; if she has not, ask her if she can take 5 minutes to do it right now or if she has any questions
   - If the patient does not remember receiving the email, ask her to look for the reminder, which will come from suicommunity@augs.org and provide another card if needed
2. Complete the Surgeon Questionnaire at 12 months
FAQs

**Which patients should I enter into the registry?**
- Patients who are having surgery for SUI are eligible for entry into the registry, including patients who are having concomitant surgery for POP or other procedures. Patients who opt only for conservative therapies (i.e. physical therapy or pessary) are not included in the registry at this time.
- Patients who are diagnosed only with urge urinary incontinence should not be included in the registry.
- Patients who have mixed urinary incontinence can be included as long as they are having surgery for SUI; additional treatment for OAB/UUI does not exclude them from the registry.
- Patients with a history of pelvic malignancy and/or pelvic radiation are excluded from the registry.

**Can I enter a patient into the QCDR Module and the SUI Module? Does the registry do this automatically?**
- Patients can be entered into both modules if they have qualifying procedures.
  - Please note that the QCDR Module mostly focuses on prolapse and concomitant surgeries so patients only having SUI surgery are generally not eligible for the QCDR Module.
- Because of the low overlap currently, patients do not auto-populate the QCDR Module and cannot be imported but data can be entered into the web dashboard manually if desired.

**How do I find a specific patient?**
- From the patient list dashboard, you can search for a patient by name (first or last), MRN, date of birth or email address. Just type your identifying info into the box below the category name on the patient list and click the magnifying glass next to the box.

**What happens if I accidentally delete a patient?**
- Good news! You cannot accidentally delete patients from the registry. Patients cannot be removed once they are entered. If you need to inactivate a patient (i.e. patient does not have surgery after all, patient is deceased), click the Yes/No slider under Active Status on the patient list dashboard.
- **Important Note:** you CANNOT reactivate an inactive patient; if a patient does not want to receive additional emails, do NOT inactivate her. Ask her to click Unsubscribe on the survey email, or contact aquire@augs.org and we will remove her from the list.

**I accidentally inactivated a patient! Now what?**
- Unfortunately, we cannot reactivate an inactive patient (or an inactive visit). However, if you still have the patient’s information, you can re-enter her. The system will allow you to use the same MRN if the patient is inactive.
- Remember, if a patient does not want to receive emails, ask her to unsubscribe or email aquire@augs.org to unsubscribe her, do not inactivate her. Patients who do not want to answer surveys can still have information entered into the registry for quality and device tracking purposes.

**What happens if I change a Consulting Visit to an Unscheduled Visit? Or a Surgery Visit to an Unscheduled Visit?**
- The system will warn you before you do anything you cannot undo. You can change one visit type to another, but that will clear the data from that visit AND all associated visits.
- So if you change a Surgery Visit to a Consulting Visit, all surgical information will be lost AND all patient feedback surveys and surgeons questionnaires associated with that surgery, as well as an unscheduled visits linked to that surgical visit.
- In general, visit types should not be changed after visits have been saved.

**Why can’t I change the data on the Device Information tab?**
- You may notice that you save device information on the tab, it cannot be changed. This is to preserve data integrity and allow the registry to effectively track devices in case of later complications.
Because the system does not allow “dummy” UDIs, if you have entered a UDI and fetched data from the AccessGUDID database, the device must be real and we want to track its lifecycle.

If you do not complete a planned surgery, a device breaks or malfunctions during surgery, or for some other reason you do not use a planned device, please do not save this UDI in the system.

If you remove a device from a patient, please enter this as an Unscheduled Visit.

**When do Surgeon Questionnaires close?**
- We know surgeons are very busy and everyone’s workflow is different. Surgeon questionnaires do not have a close date, so you can enter data at any time.
- We encourage entry as close as possible to the visit itself.
- Patients can be back-entered into the registry and you can complete surgeon questionnaires, but patients will not receive surveys that are closed.
  - Example: You saw Jane Doe for a consult on 07/01/2017 and she had surgery on 08/02/2017. If you enter her into the system on 08/01/2018, she would receive her 1 year Patient Feedback survey but not her 6 week Patient Feedback survey. Both 6 week and 1 year Surgeon Questionnaires would be open for your completion.

**When to Patient Feedback surveys close?**
- The patient will receive her first notification exactly 5 weeks after her surgery date (day 35).
- Two reminders are sent to the patient after the first notification.
- Patient Feedback surveys close 30 days after they open (65 days after surgery).

**If a patient doesn’t want to receive emails, how do I change that?**
- If the patient expresses a desire not to receive emails at or before surgery, uncheck the box in the upper right of the Surgery Visit form (default is for box to be checked).

If the patient wants to discontinue surveys after she has received one (or multiple), she can click unsubscribe on the email itself or email suicommunity@augs.org.
- The provider can also email aquire@augs.org and we can unsubscribe her.

**Where can patients find more information about the registry and connect with other patients?**
- On the patient info fact sheet and card, there is a link to a community for SUI surgery patients.
- All patients in the registry are automatically part of the community; they can email suicommunity@augs.org for more information or to leave the group.
- If the patient asks, inform her that no one other than patients and community administrators have access to the patient community: neither providers nor companies nor anyone else can access what’s said there, so we encourage patients to be completely honest and ask any questions they have.
Patient Info Fact Sheet

The SUI Surgery Module
The SUI Surgery Module is a series of questions your surgeon completes electronically about the surgeries he or she does. These questions include such items as whether or not your provider fully explained the risks to you as a patient, whether or not you had a device (such as a sling) implanted, and whether you had any complications.

There is also a section of the module for your input. You will receive an email five weeks after your surgery asking you to complete five questions about how you are feeling, including such questions as whether you’re still having pain and whether you’re still leaking urine. Your feedback is absolutely critical to this process! The only way for your provider to improve is with your feedback.

The purpose of this module is to help surgeons across the country track how they are doing and find areas where they can improve. Your participation and input will improve care for thousands of women just like you. And we hope it will help you start important conversations with your provider if you have any questions or issues.

Frequently Asked Questions

1. What do I have to do?
   All you have to do is complete the brief questionnaire when it is emailed to you. Five weeks after your surgery, you’ll get a survey from suicommunity@augs.org. Click on the link in the email and create a password of your choosing, then answer 6 questions about your health and click Submit. That’s it!

2. What do I get out of participating?
   You’ll be enrolled in a community of women who are also having SUI surgery and have access to a wealth of resources about your condition. You can communicate with other women who have had the same surgery and ask any questions. You’ll be part of an effort to improve care for thousands of other women. Some sites even offer an incentive for patients to participate.

3. What happens to my data?
   Your data, including your name or email address as well as your health information, is completely secure and is never shared with anyone. If you participate in the patient community, you may receive emails when new discussions are posted, or if there are any changes to the registry itself. Otherwise, the only contact you’ll receive is the follow-up questionnaire about your health post-surgery.

4. Where can I find more information about SUI? About the module?
   Visit Voices for PFD at www.voicesforpfd.org and click on the Resources link. You’ll also be part of a SUI surgery-specific community that will have additional information about the module. Visit the community here:

5. What if I change my mind about participating?
   If you ever decide you don’t want to receive the survey, you can unsubscribe by clicking the link in the email you receive, or emailing suicommunity@augs.org. Or simply inform your provider the next time you see him or her.

6. What if there’s a problem after my surgery? Can the registry help?
   If you have any concerns about your health after your surgery, contact your provider immediately or call 911. In the long term, your participation will improve health for thousands of women undergoing the same surgery as you. By tracking outcomes, we will be able to determine which surgeries and devices work best.

For more information

1. Additional questions? Visit the SUI Surgery Patient Community (see your Patient Information card) or email suicommunity@augs.org
